

At Roanoke Creek Ranch, we breed old fashioned type Tennessee English Shepherd dogs. Our Natchez Trace Strain comes from the breed's best foundation bloodlines.

Nutrition Matters

We are only comfortable with a canine diet that has research backing its safety and efficacy for pets, has been tested using feeding trials, and has ingredients which have been shown over time to provide the necessary nutrients an animal needs for health and well-being.

We feed the appropriate Purina® Pro Plan® dog food formula to each of our adult English shepherd dogs and to all our English shepherd puppies.

Registered English Shepherds

The Natchez Trace Strain

An Excellent All-Purpose Dog

With intelligence, alertness, and companionship, the English shepherd dog fits well into urban home or rural home and farm life.

The carefully selected English shepherd dogs of our breeding program are:

- Screened for hereditary anomalies using comprehensive DNA testing
- Screened for hip dysplasia by veterinary science professionals
- Paired for consistent performance and reliable temperament

About our breeding program

At three days old, we begin each puppy on our Early Neurological Stimulation program. ENS goes until day sixteen. Beginning at three weeks of age, each puppy begins our critical socialization program:

- We instill our puppies with the basic desire to seek out both humans and other dogs as opportunities for emotionally positive experiences.
- We foster our puppies' physical health and evolve their motor skills in order to begin each puppy on the path to neurologically sound and physically robust development.
- We instill our puppies with the attitude that novelties are opportunities for enrichment rather than things to be feared or avoided.
- We prepare our puppies to quickly recover from fear and seamlessly deal with stress.
